## Enterprise Technologies and Analytics

With ever growing information and increasing business complexity, data analysis for decision making process is becoming a critical business need in the enterprise world. Analytics extract insights from your data to deliver change-enabling value. Whether Analytics using statistical models, systems integration, data visualization or Big Data, we can help you make the best possible business decisions.
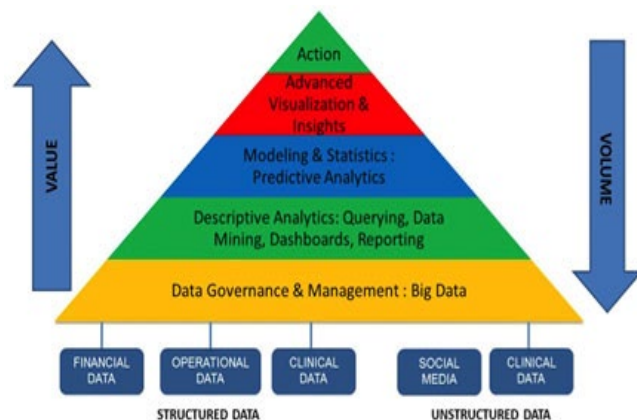

Our Enterprise Analytics solution offerings are a perfect blend of traditional and next-gen business intelligence platforms that enable our customers get improved data insight. With our technical competency touching every segment of Enterprise Analytics and execution footprints across the globe, we have successfully delivered Analytic Solutions that have enabled our customers extract hidden insights buried within large, unwieldy datasets.

**DATA VISUALIZATION** - Isolate vital patterns from trivial datasets for making better business decisions
**PREDICTIVE ANALYTICS** - Predict game changing patterns and behaviors using statistical models. Our Predictive Analytics Platform mines information by applying data science mechanism using multiple statistical modeling techniques to help our customer predict events like risk & fraud, churn, Wellness and behavior.
**DW/BI ANALYTICS** - Maintain holistic view of enterprise dataset for single version of truth
**BIG DATA ANALYTICS** - Harness and Ingest large data set to generate insight

## Management Consulting and Research & Analysis

**MANAGEMENT CONSULTING -** Our Management Consulting practice for the contemporary healthcare enterprise provides innovative and aligned planning to ensure proper direction for the enterprises IT initiatives. The strategic plan has to be aligned to an organization's broader objectives is imperative to meet the strategic and operational needs for the enterprise as a whole. To be responsive to the external marketplace, the IT planning has to know the current state and future visions to be responsive to changes in the marketplace. Our consultants work together with our clients for developing an actionable roadmap for the IT organization. We put great emphasis on the readiness to proceed within the business units, not only the needs of the IT initiatives, which enables success within the organization, implementation, and governance structures.

**RESEARCH & ANALYSIS -** Our research and analysis capabilities provide clear and concise direction to an organization's development efforts, furnishing confidence in the successful delivery of the development initiative. The research and analysis efforts enable our clients to help understand their environments, resources, products, and institutional processes. As a result, permitting our clients to successfully transform and evolve to an innovative state, as well as, identify inefficiencies and other opportunities for improvement.
