The Next-Gen Lending Technology

Robust, Intuitive & Scalable

Modules

Loan Origination

The cloud-based Loan Origination Solution manages the entire life cycle of Customer Onboarding, Application Processing, Underwriting & Sanction, and Disbursement.

- Enable multiple channels for customer onboarding.
- Deploy Digital verification methods for faster data validation
- Leverage the power of APIs to create connected origination system/platform

Credit Underwriting

AutoCloud's loan-underwriting system is an advanced and automated underwriting rule-based solution that improves the consistency of underwriting, and reduce the cost of originating a loan.

- Configure BRE and automate eligibility matrices for straight through processing (STP) of Loan application
- Employ pre-built credit models or customize as per the specific business use case
- Streamline unstructured data points to create an alternative credit assessment models.

Loan Management

SynapOne Loan Management enables financial institutions to offer Value Added Products (VAP) which integrated single window that can be used by FIs to address customer service needs.

- Comprehensive dashboard to view of customer and loan data for efficient, quick servicing & management
- Consolidate and Automate all customer communications
- End-to-end workflows that improve transparency and operational efficiency throughout the lending process
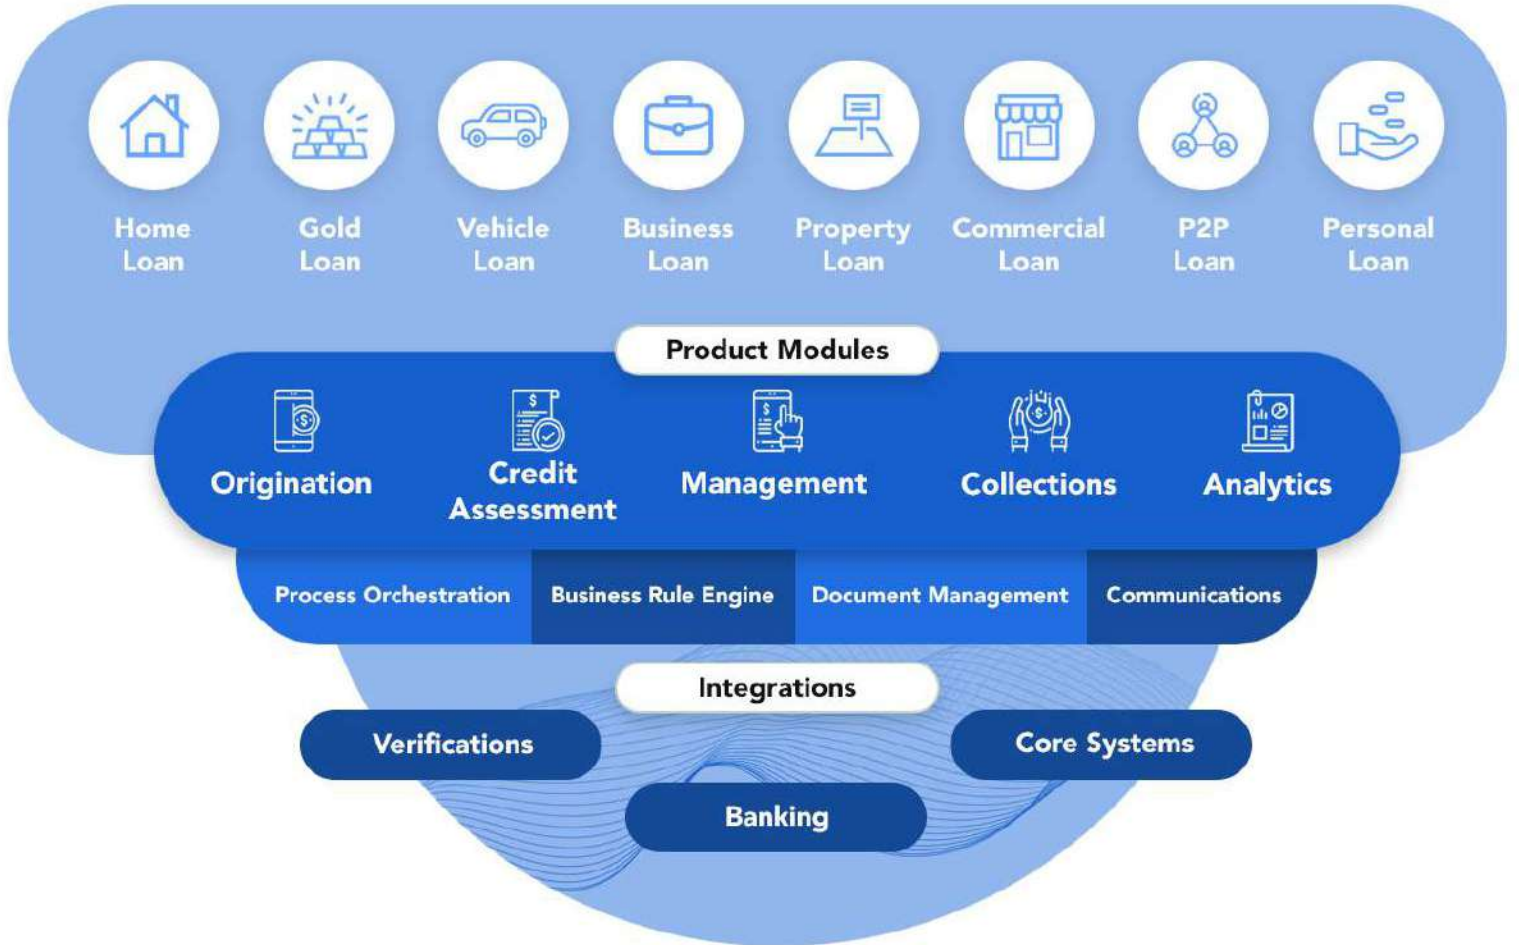

Loan Collection

SynapOne fully supports processing of payments, recording of principal and interest payments, calculation and processing of late fees and other payment collection functions.

- Enable multiple channels of collections to increase on time collection and reduce NPAs
- Mobility solutions for field collection with enhanced tracking and instant reconciliation
- Deploy different collection mechanism and workflows based on loan status to increase collection efficiency.
